

# BEST PRACTICE LIMING

to address sub-soil acidity in NE Victoria

Riverine Plains Invites you to

## Sub-soil Acidity Webinar

Do you have a sub-soil acidity issue?

Riverine Plains is leading a new GRDC investment, Best practice liming to address sub-soil acidity in NE Victoria, which aims to increase awareness of acidity and pH stratification in local soils, as well as the management tools available to farmers.

With the project recently getting underway, local soil experts Cassandra Schefe (AgriSci) and Jane McInnes (Riverine Plains) will facilitate a webinar to;

- *Provide farmers and industry experts the opportunity to have input into sub-soil acidity research in the region*
- *Seek feedback on the design of a liming application method & rate trial, and a lime quality demonstration trial to be established as part of the project*
- *Help farmers better understand amelioration options for local soils.*
- *Hear about the research that has been done in the region and how the project will build on this.*
- *Receive expressions of interest from interested host farmers*

If you would like to have input into the trial or project, have a paddock with a sub-soil acidity issue that might be suitable to host the trial, or just want to hear more about the project and sub-soil acidity in the region, please register for this event.

**WEBINAR**

THURSDAY 19th AUGUST

**7:30-8:30pm**

(via Zoom) Registration details below

## REGISTRATION

Open until midday Thursday 19 August, 2021
